# Introduction

---

## Objectives

- The objective of this research is to provide statistics and insights for facial plastic surgery.
- This study also provides trend information regarding the frequency of both reconstructive and cosmetic surgery – the results are compared to similar studies conducted since 2000.

## Study Method

- A self-administered questionnaire was sent to 1,336 members and fellows of the American Academy of Facial Plastic and Reconstructive Surgery (AAFPRS), including those board certified by the American Board of Facial Plastic and Reconstructive Surgery (ABFPRS).
- Since 2004, only ABFPRS certified members received the survey, so to trend accurately, only answers from those Surgeons who are ABFPRS certified are being reported (N = 118 2006/N=145 2005).
- Overall, 193 completed surveys were returned, representing a 15% response rate.
- All data tabulations were conducted by ICR in Media, PA.

## Reading Notes

- The base sizes are noted for each question. In some cases, the base sizes are less than the total (N=118 ABFPRS certified Surgeons) since some surgeons performed zero procedures (for a specific procedure) in 2006. It was necessary to report “zero suppressed” findings since data obtained prior to 2000 were reported this way. These cases are noted.
- Where percentages add to more than 100%, it is due to either a multiple response question, or rounding to the nearest percent.
- Where percentages add up to less than 100%, this is due to the exclusion of “don’t know” and “no answer.” In some cases, physicians incorrectly entered data.
- In some cases questions were changed slightly from year to year to obtain more accurate data. As a result, we are not able to provide trend information since 2000 for these questions.
- And, most importantly, **any projections based on these results must be made with extreme caution.** The base sizes are small (N=118) resulting in significant margins of error around the data.

## About AAFPRS

- The AAFPRS is the world’s largest association of facial plastic and reconstructive surgeons – with approximately 2,800 members – whose cosmetic and reconstructive surgery focuses on the face, head and neck. Academy fellows are board-certified and subscribe to a code of ethics. In addition, the AAFPRS provides consumers with free information and brochures and a list of qualified facial plastic surgeons in their area by visiting the AAFPRS Web site [www.FACEMD.org](http://www.FACEMD.org).

## Contact Information

- For more information, or to schedule an interview with an AAFPRS spokesperson, please contact Rita Magness at AAFPRS, [rcmagness@aafprs.org](mailto:rcmagness@aafprs.org) or (703) 299-9291, x227.

# Major Findings

---

- ABFPRS certified surgeons report performing an average of 865 facial cosmetic surgical, cosmetic non-surgical, and reconstructive procedures per surgeon in 2006 (see page 8). This proportion is up by 34% since 2005, and similarly increased since 2000 (+39%).
  - Increases from 2000 are primarily attributable to the increase in cosmetic non-surgical procedures among women (+69%) and men (+91%).
  - The increase in cosmetic surgical procedures since 2005 are mainly attributable to an increase among men (+59%), and also women (+44%).
- Compared to 1999, Hispanic (+37%), African American (+43%), and Asian-American (+28%) cosmetic surgical patients increased (see page 9). The proportion of Caucasian cosmetic surgical patients is similar to that in 1999, only increased by 2%.
  - In the past year there has been little change among Hispanic, African American, and Caucasian cosmetic surgical patients; Asian American cosmetic surgical patients have decreased since 2005 (-19%).
- In 2006, the most popular cosmetic surgical procedures were blepharoplasty (58 procedures per surgeon, on average), rhinoplasty (54 procedures), and Rhytidectomy/plasty (53 procedures). The most common cosmetic non-surgical procedures were Botox (384 procedures), microdermabrasion (264 procedures), Hyaluronic acid (169 procedures), and chemical peels (162 procedures) (see pages 10-12).
- The most notable increases in number of procedures from 2005 to 2006 are lip augmentations, collagen and poly-L-lactic acid. Comparing to 2002, the most significant increases in procedures are as follows: Botox (+221%), microdermabrasion (199%), lip augmentations (+119%), laser resurfacing (+112%), and rhytidectomy/plasty (+105%). The following are notable changes from 2004 (see page 13):

## Overall Increases (since 2005):

- Lip augmentations (up by 167%)
- Collagen (up by 133%)
- Poly-L-lactic acid (up by 114%)

## Increases among Women and Men (since 2005):

- Microdermabrasion in men (up by 234%)
- Fat injections in men ( up by 145%)
- Lip augmentations in women (up by 145%)\*
- Poly-L-lactic acid in women (up by 118%)

## Overall Decreases (since 2005):

- Laser resurfacing (down by 18%)

- \* Caution: Lip augmentations up in men since 2005 (up by 627%\*), however the average number of procedures was very low in 2005 (about 1 procedure per physician on average) and 2006 (about 8 procedures).

# Major Findings, continued

---

- Women continue to be the most likely candidates for facial plastic surgery – 77% of all surgical procedures and 81% of all non-surgical procedures are performed on women (see *page 8*). Men and women are almost evenly split in terms of reconstructive procedures.
  - The most common cosmetic surgical procedures undergone by women are blepharoplasty (average of 47 procedures per surgeon that performed at least one procedure in 2006), rhytidectomy / rhytidoplasty (46 procedures), lip augmentations (39 procedures), rhinoplasty (36 procedures), and ablative skin resurfacing (33 procedures).
  - The most common non-surgical cosmetic procedures among women are Botox (335 procedures in 2006), microdermabrasion (230 procedures), chemical peels (139 procedures), and hyaluronic acid injections (139 procedures) (see *pages 14 and 16*).
- Among male patients, microdermabrasion (73 procedures in 2006), Botox (52 procedures), hair transplants (39 procedures), chemical peels (32 procedures), hyaluronic acid injections (22 procedures), and rhinoplasty (19 procedures) are the most common procedures (see *pages 15 and 17*).
- Surgeons estimate that approximately one out of every two (53%) procedures performed in 2006 took place at private offices, and three in ten (28%) at a free-standing surgical center. About one out of every six procedures (16%) were performed at hospitals, and much fewer at a medical spa (2%) (see *page 19*).
- Rhytidectomy/rhytidoplasty commands the highest average fee per procedure (\$6894, on average), followed by hair transplants (\$6126), rhinoplasty (\$4829), and forehead lifts (\$3685) (see *page 20*).
- More than one-half of patients (56%) have had multiple facial procedures in the same year (see *page 21*).

# Major Findings, continued

---

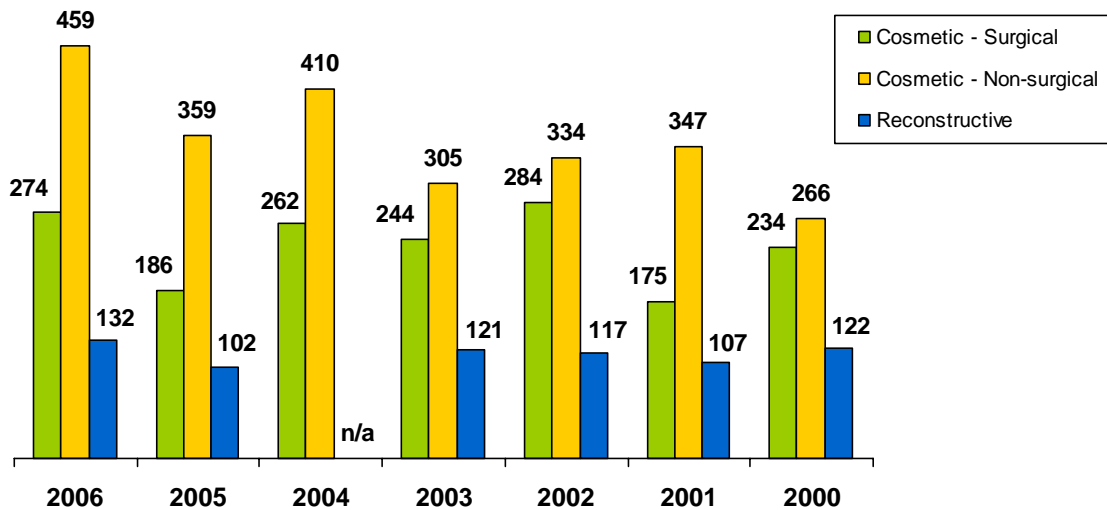

- According to these surgeons, the latest trends seen in their offices in 2006 are patients being more educated about plastic surgery (86% agree), patients being given plastic surgery as a gift (49%), patients traveling abroad for plastic surgery and then coming in with complications and re-do's (48%), teens undergoing cosmetic surgery (48%), and couples undergoing cosmetic surgery together (47%).
- In 2006 among four different popular cosmetic surgeries, African Americans were most predisposed to have received rhinoplasty (62%), as were Hispanics (53%). Asian Americans were most likely to have received blepharoplasty (44%), while Caucasians were slightly more likely to have received blepharoplasty (32%) and then rhinoplasty (29%).
- Surgeons feel that the future holds more filler introductions into the market (96%) and patient safety as a continued focal point in cosmetic surgery (94%). They also foresee an increase in cosmetic surgery for ethnic populations (85%).
- Most (85%) surgeons indicated they are ABOto certified (American Board of Otolaryngology). Three in five (61%) are ABFPRS certified (American Board of Facial Plastic and Reconstructive Surgery).

# Detailed Findings

# 2006 Overall Totals and Trends

## Average Number of Procedures Per Surgeon

<b>Women</b>								% Change Since 2000	% Change Since 2005

\*\*In 2004, these procedures were included in Filler Injections

\*\*\*Starting in 2004, Laser Resurfacing was asked as 'Ablative Skin Resurfacing' which includes: deep peels, laser, and dermabrasion

^New in 2005

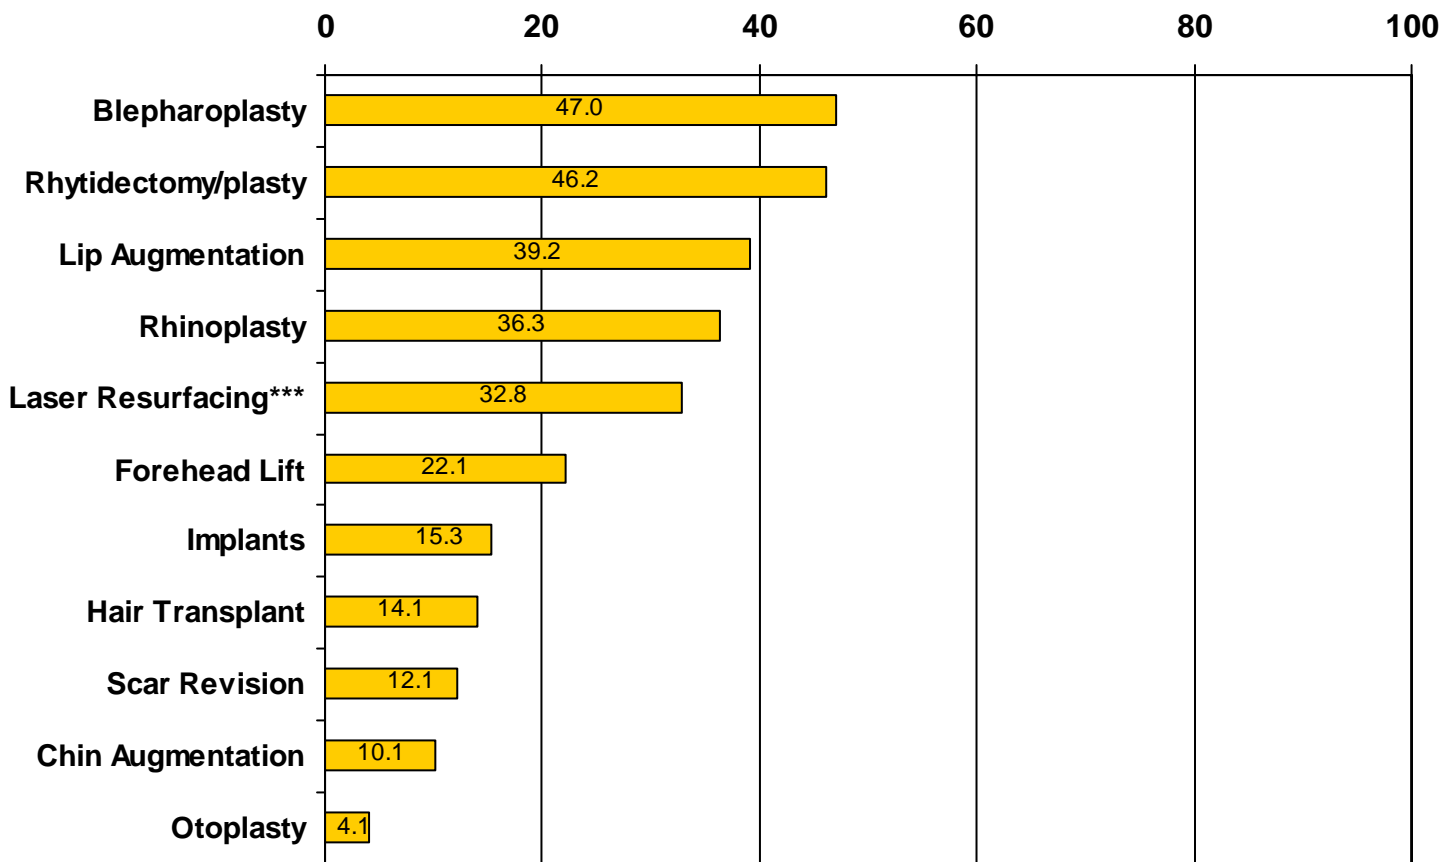

Q7. Please estimate the number of procedures, the average cost per procedure, and the percentage of male/female patients receiving each procedure.

Base: N=118 ABFPRS certified Members (Surgeons responding zero to any procedure category are NOT included above)

Note: The average number of procedures for MEN and WOMEN do not add to the TOTAL numbers. When analyzing the number of procedures on MEN, there was a certain number of surgeons that performed zero procedures in 2004. The number of surgeons that performed zero procedures on WOMEN is a different number. Finally, when looking at the total, a surgeon would be excluded only if they performed zero procedures in 2004 on either men or women, which is highly unlikely.

# Patients By Gender - Surgical Procedures

Average Number of Procedures Performed Per Surgeon  
-- Women --

Surgeons responding zero to any procedure category are NOT included above.

# Patients By Gender - Surgical Procedures

Average Number of Procedures Performed Per Surgeon  
-- Men --

\*\*\* Starting in 2004, Laser Resurfacing was asked as 'Ablative Skin Resurfacing' which includes: deep peels, laser, and dermabrasion  
^ New in 2005

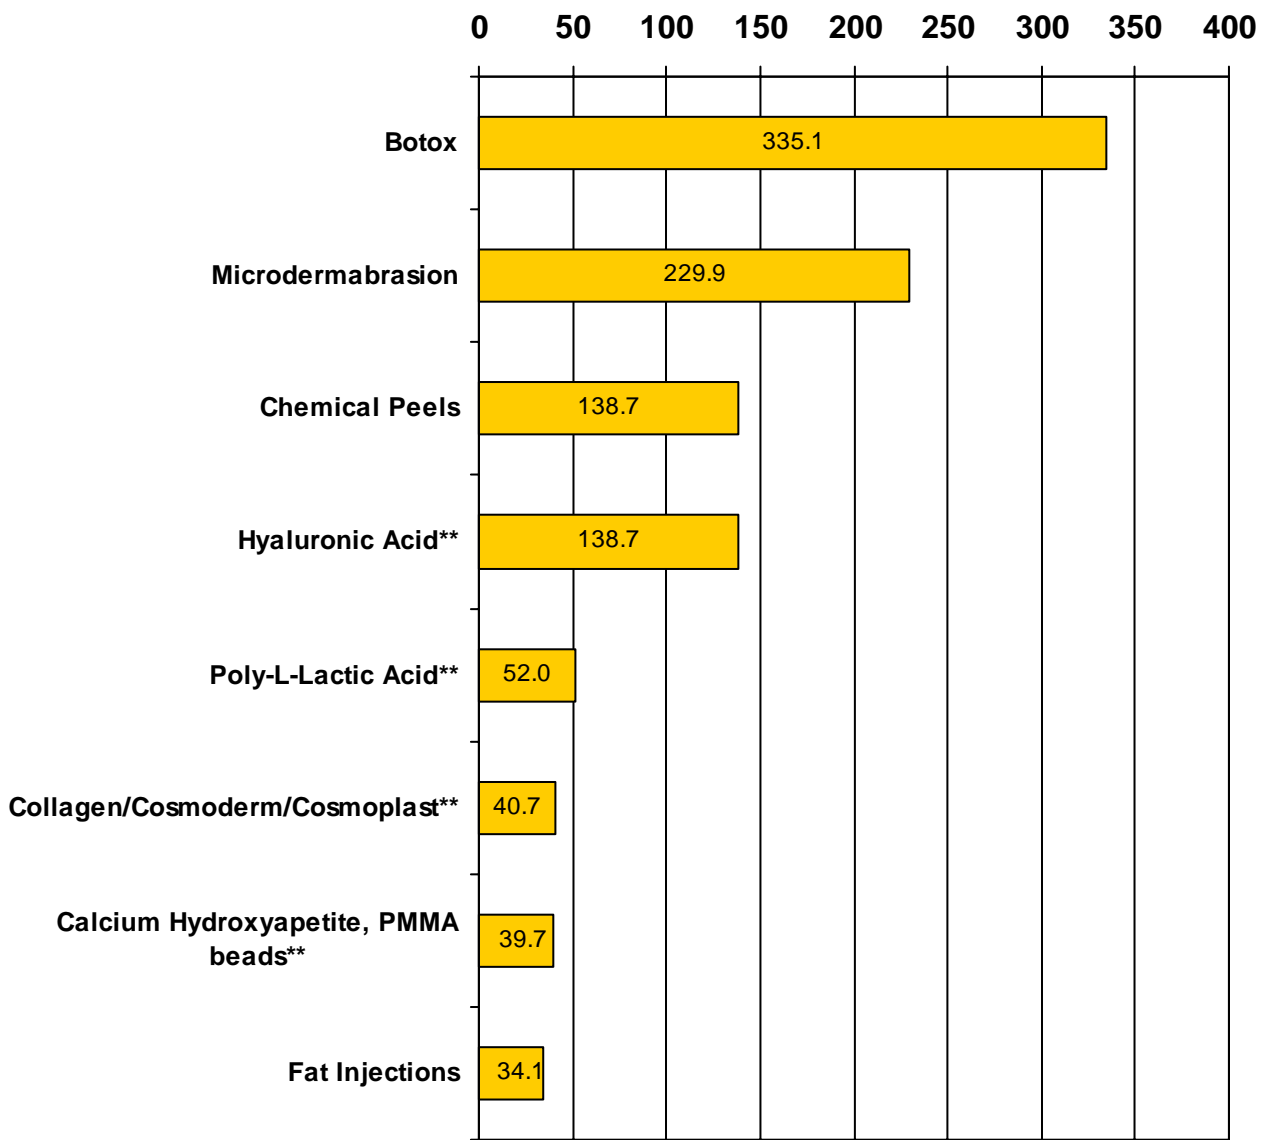

Q7. Please estimate the number of procedures, the average cost per procedure, and the percentage of male/female patients receiving each procedure.

Base: N=118 ABFPRS certified Members

Surgeons responding zero to any procedure category are NOT included above.

# Patients By Gender – Minimally Invasive Procedures

**Average Number of Procedures Performed Per Surgeon  
-- Women --**

\*\* In 2004, these procedures were included in Filler Injections

Q7. Please estimate the number of procedures, the average cost per procedure, and the percentage of male/female patients receiving each procedure.

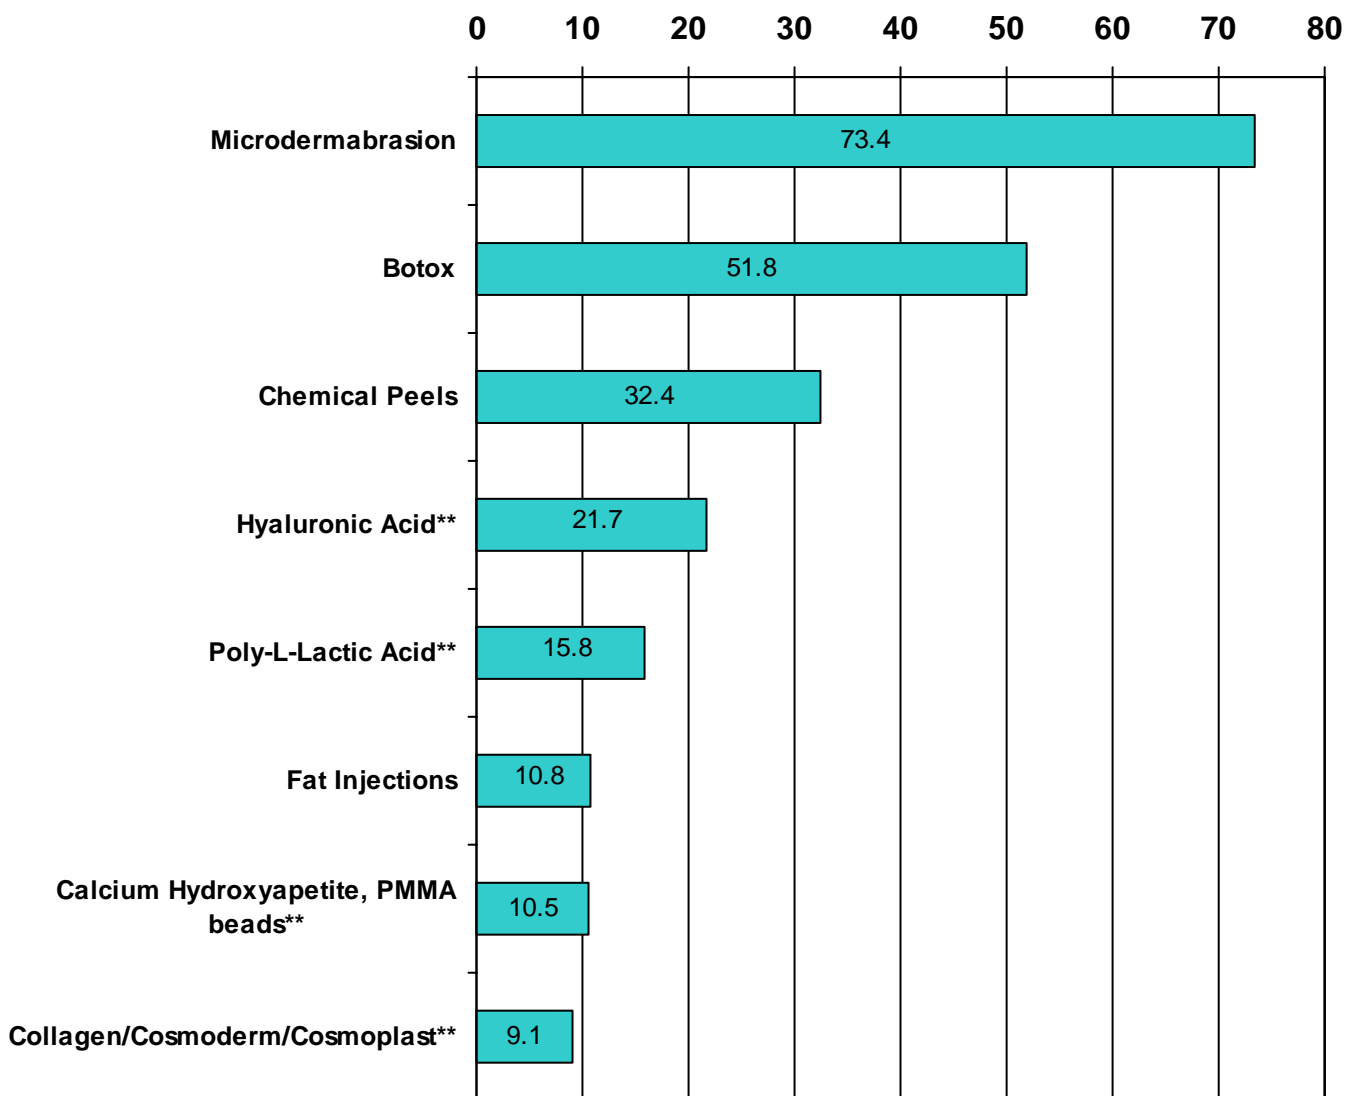

Base: N=118 ABFPRS certified Members

Surgeons responding zero to any procedure category are NOT included above.

# Patients By Gender – Minimally Invasive Procedures

Average Number of Procedures Performed Per Surgeon  
-- Men --

\*\* In 2004, these procedures were included in Filler Injections

Q7. Please estimate the number of procedures, the average cost per procedure, and the percentage of male/female patients receiving each procedure.

Base: N=118 ABFPRS certified Members

Surgeons responding zero to any procedure category are NOT included above.

# Patients By Age

- Numbers by age group depicted on this table are based on the number of procedures reported by age group.

## Average Number of Procedures Performed Per Surgeon --Zeros Excluded--

	Total 2006	Under 21	22 - 40	41 - 60	61+
Blepharoplasty	57.5	16.1	14.5	32.8	14.2
Botox	384	43.2	133.1	198.8	72.2
Brow Lift	18.9	5.3	6.1	14.8	7.9
Chemical Peels	162.0	60.4	61.5	77.7	37.0
Facelift	52.8	--	9.7	35.1	15.9
Filler Injections	296.3	35.8	134.0	157.8	71.7
Rhinoplasty	53.5	13.2	27.8	13.8	7.1

\*\* In 2004, Filler Injections included five specific procedures rolled up into a net, including: Calcium Hydroxyapatite, Collagen Injections, Hyaluronic Acid injections, Poly-L-Lactic Acid Injections, and Poly Methyl Methacrylate Injections; for Total in 2005 & 2006 these were asked separately

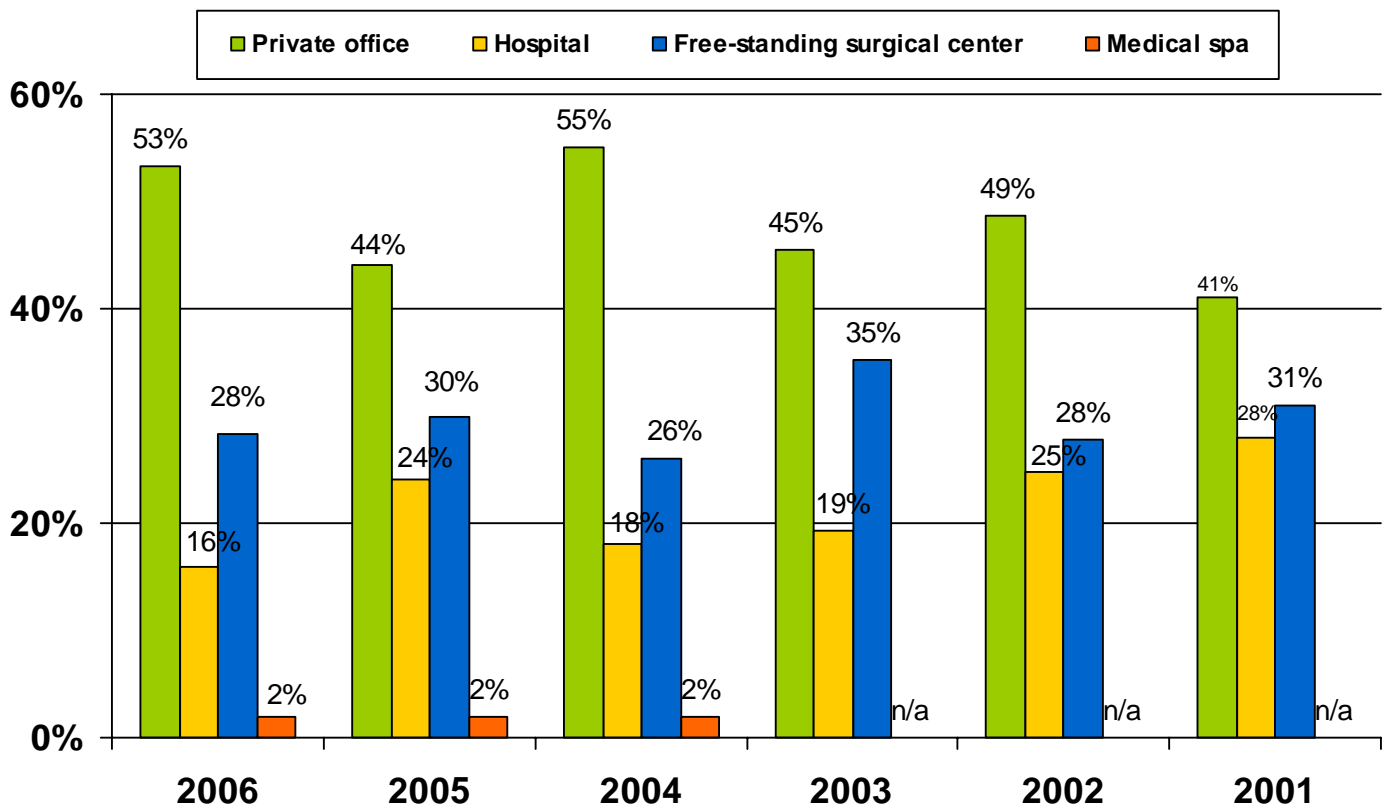

Q7/Q8. Please estimate the number of procedures, the average cost per procedure, and the percentage of male/female patients receiving each procedure.

Base: N=118 ABFPRS certified Members; Surgeons responding zero are NOT included

Note: The average number of procedures for each age group do not add to the TOTAL numbers. The number of surgeons that performed zero procedures is a different number for each age group -- therefore, the base sizes vary. Finally, when looking at the total, a surgeon would be excluded only if they performed zero procedures in 2005 on all age groups.

# Location of Procedures

## Percentage of Procedures By Location

Q2. Please estimate the percentage of procedures (surgical and non-surgical) you performed in each of the following locations during 2006.

Base: N=118 ABFPRS certified Members

n/a = All trend data not available for medical spa since data only collected since 2004.

# Average Fees

## Average Cost (\$) Per Procedure (in 2006 and 2005)

Scar Revision	1327	1245	6.6

\*\* In 2004, these procedures were included in Filler Injections

\*\*\* Starting in 2004, Laser Resurfacing was asked as 'Ablative Skin Resurfacing' which includes: deep peels, laser, and dermabrasion

^ New in 2005

Q7. Please estimate the number of procedures, the average cost per procedure, and the percentage of male/female patients receiving each procedure.

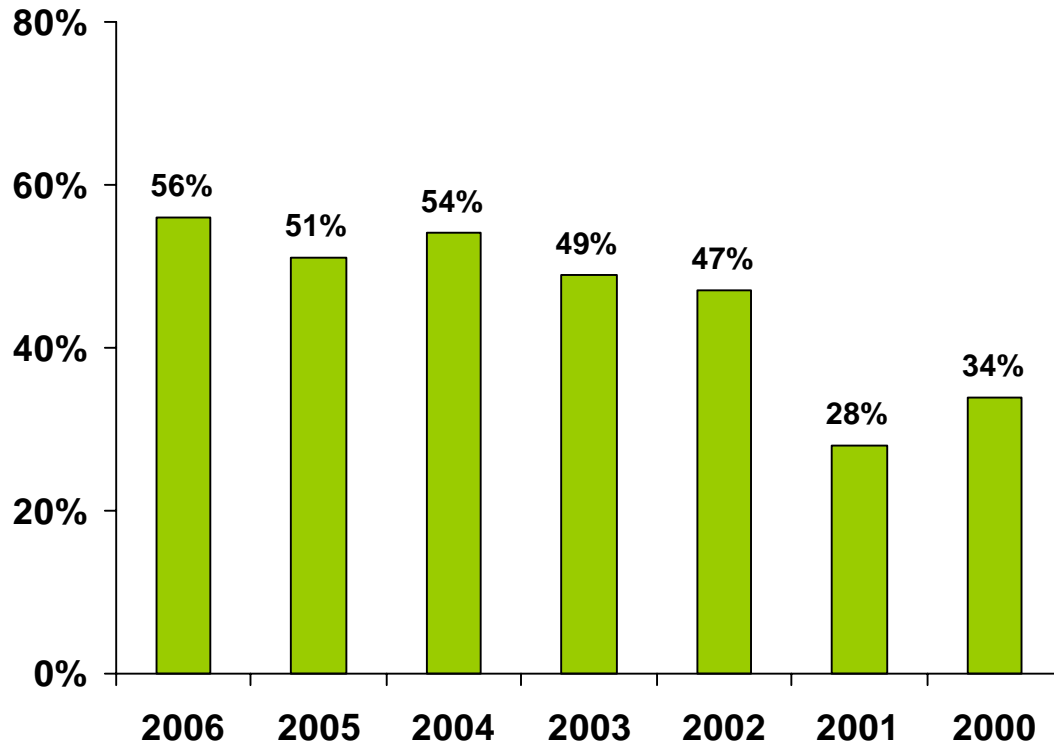

Base: N=118 ABFPRS certified Members (2006); 145 ABFPRS certified Members (2005)  
Surgeons responding zero to any procedure category are NOT included above.

# Multiple Facial Procedures

---

- Surveyed surgeons estimate that just over one-half of their patients (56%) have had multiple facial procedures in the same year, slightly more than in 2005.

**Percentage of Patients With Multiple Facial Procedures In The Same Year**

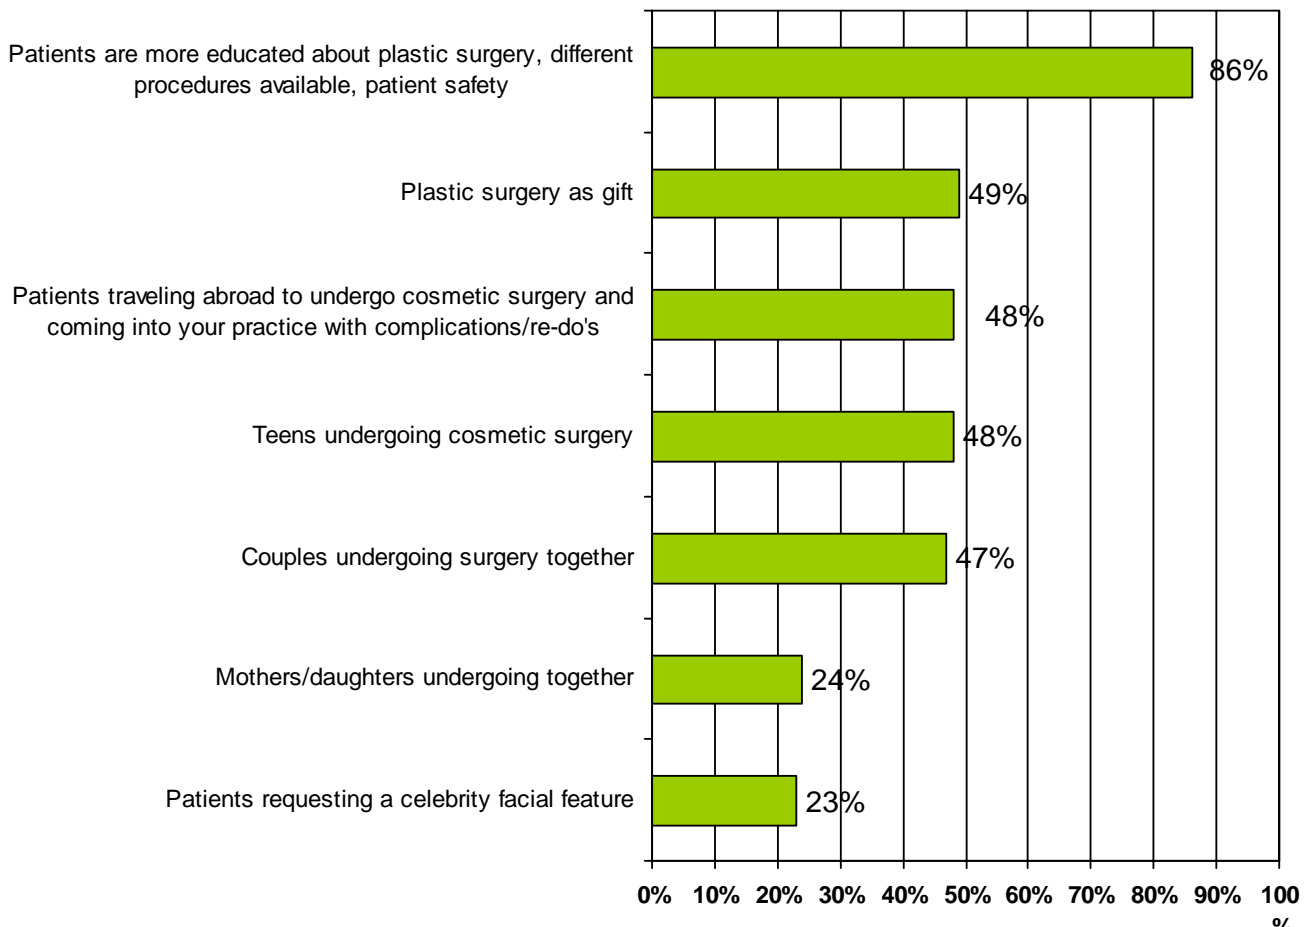

Q3. Please estimate the percentage of your patients on whom you performed multiple facial procedures (at the same time or during the course of the same year).

Base: N=145 ABFPRS certified Members

# Past Year Trends

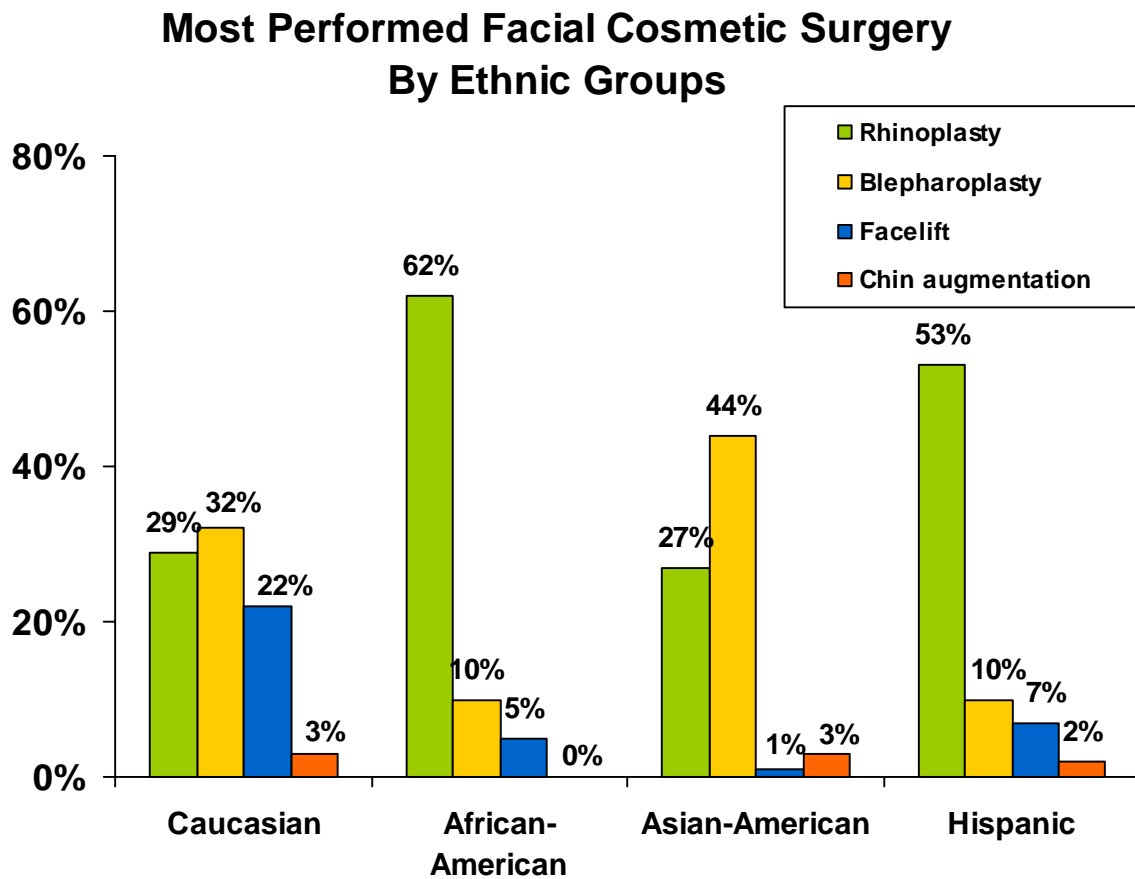

- Most surveyed surgeons say they have seen an increase in patient knowledge regarding plastic surgery in the past year.
- Approximately one-half have seen patients given plastic surgery as a gift, patient traveling abroad to undergo cosmetic surgery and then coming into their practice with complications or re-do's, teens undergoing cosmetic surgery, and/or couples undergoing surgery together.

## Trends in Past Year

# Procedures by Ethnicity

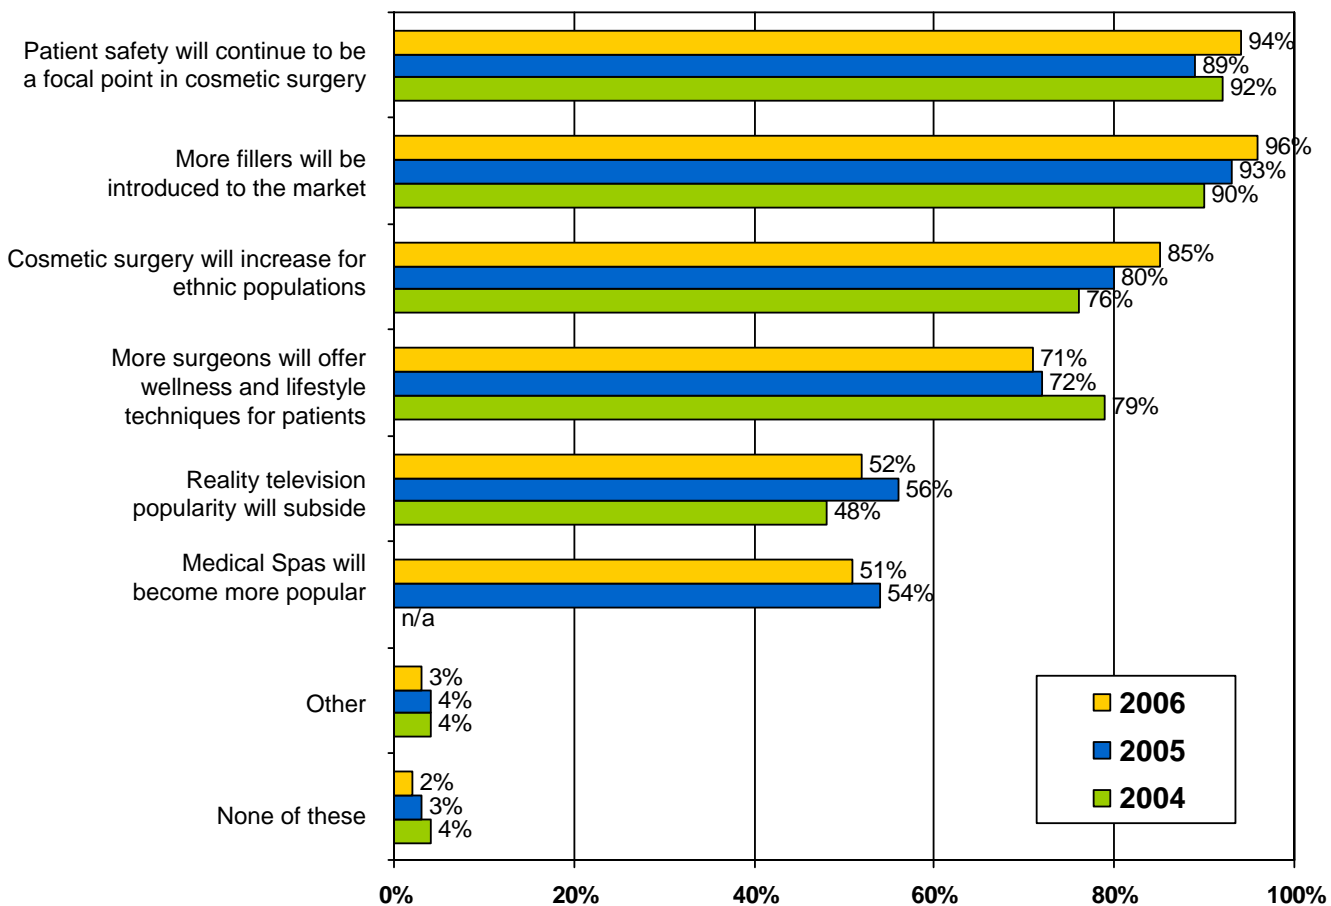

- Considering four popular cosmetic surgery procedures, African Americans are most likely getting Rhinoplasty (62%), as are Hispanics (53%). Asian-Americans are most likely receiving Blepharoplasty (44%), while Caucasians are more evenly split between Blepharoplasty and Rhinoplasty (32% and 29%).

# Future of Plastic Surgery

- The vast majority of surgeons predict that more fillers will be introduced into the market and patient safety will continue to be a focal point in cosmetic surgery. Most also feel that cosmetic surgery procedures will increase among ethnic populations.

## What Does the Future Hold for Plastic Surgery?

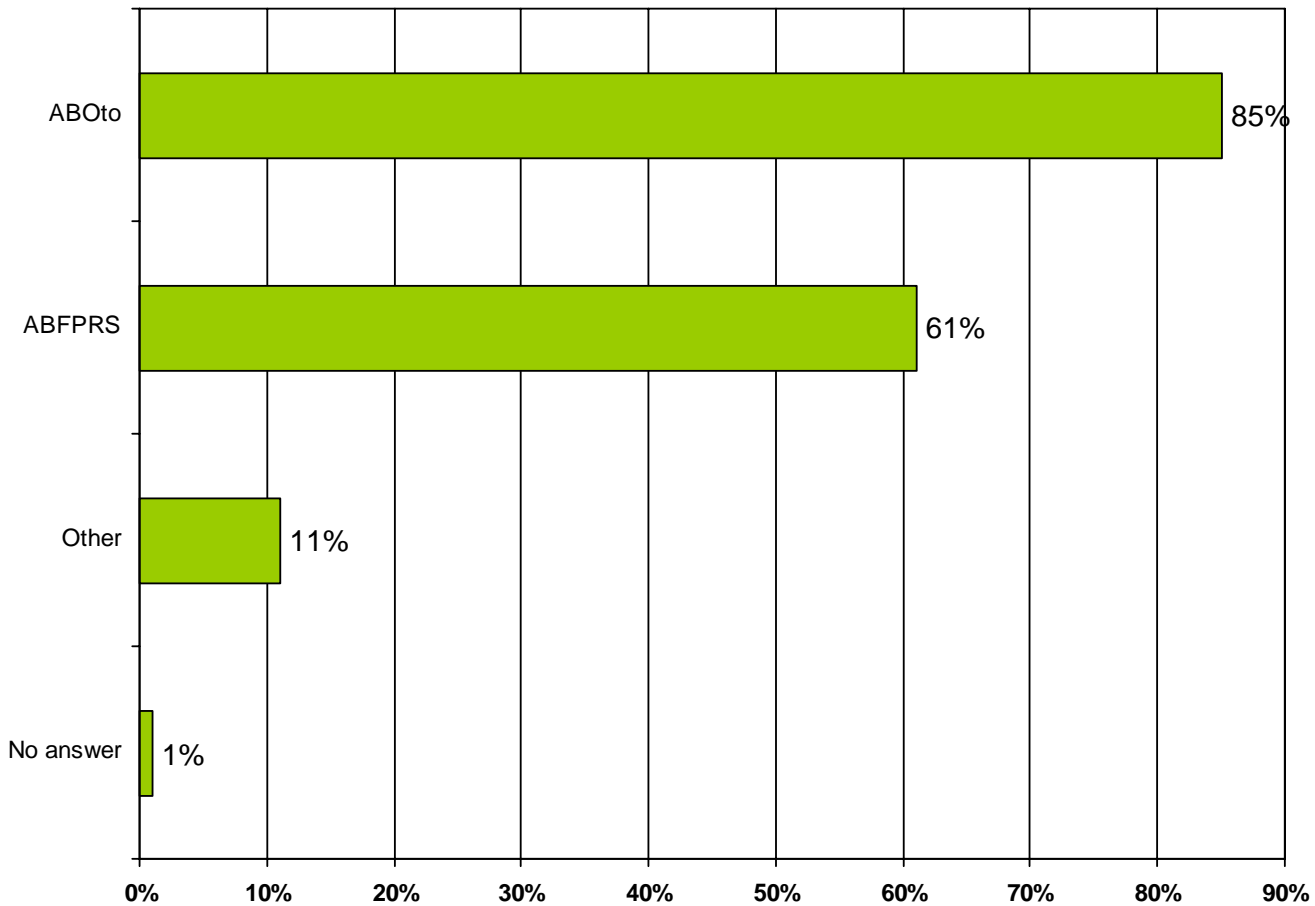

# Board Certification Status

---

- More than four in five (85%) surgeons responding are ABOto certified, while three in five (61%) are ABFPRS certified.

**Board Certification Status  
2006**

Q6. Please estimate the total costs associated with each procedure and the specific number of patients in each age group receiving each procedure.

Base: N=97 AAFPRS Members; Surgeons responding zero are included

Note: Some age fields were left blank, resulting in columns that may not add to the total # of patients

# Patients By Age (2001)

- Percent of total on this table represents totals for each specific procedure for the year 2001.
